WEB DEVELOPMENT
ACTIVITY-BASED LEARNING

Three Selected Case Studies

Name: Lingam Sasank Venkat

Roll Number: 26000938

Branch: CSM

Section: 2

Technologies used: HTML5 and CSS3 only. JavaScript has not been used.

Case Study 1: Personal Portfolio Website

Problem statement

Create a personal website that presents a student's profile, educational qualifications, technical skills, hobbies, projects, achievements, resume information, and contact details.

Website features

• Profile and introduction

• Education and skills sections

• Projects and hobbies

• Achievements and contact information

• Responsive layout using CSS

Files included

index.html — page structure and content
style.css — layout, colours, typography, cards, and responsive styling

How to run

Open the case study folder and double-click index.html. The browser loads the stylesheet from style.css in the same folder.

Conclusion

This case study demonstrates how HTML structures a web page and CSS styles it. The layout is responsive and does not require JavaScript.

Screenshot note: Open the page in a browser and insert a screenshot of the rendered page here if your faculty requires actual screenshots in the final report.

Case Study 2: College Information and Admissions Website

Problem statement

Design a college website presenting institutional information, departments, courses, faculty, admissions procedures, campus facilities, events, and contact details.

Website features

• College introduction and navigation

• Department and course cards

• Admissions steps

• Campus facilities and events

• Contact information and responsive layout

Files included

index.html — page structure and content
style.css — layout, colours, typography, cards, and responsive styling

How to run

Open the case study folder and double-click index.html. The browser loads the stylesheet from style.css in the same folder.

Conclusion

This case study demonstrates how HTML structures a web page and CSS styles it. The layout is responsive and does not require JavaScript.

Screenshot note: Open the page in a browser and insert a screenshot of the rendered page here if your faculty requires actual screenshots in the final report.

Case Study 3: Bakery and Cake Shop Website

Problem statement

Create a bakery website displaying cakes, pastries, cookies, custom cake designs, prices, seasonal offers, and store contact details.

Website features

• Bakery welcome banner

• Cake, pastry, and cookie product cards

• Prices and special offers

• Custom cake information

• Store contact details and responsive design

Files included

index.html — page structure and content
style.css — layout, colours, typography, cards, and responsive styling

How to run

Open the case study folder and double-click index.html. The browser loads the stylesheet from style.css in the same folder.

Conclusion

This case study demonstrates how HTML structures a web page and CSS styles it. The layout is responsive and does not require JavaScript.

Screenshot note: Open the page in a browser and insert a screenshot of the rendered page here if your faculty requires actual screenshots in the final report.

Overall Conclusion

The three static websites demonstrate different web development layouts: a personal portfolio, a college information portal, and a bakery catalogue. All three use HTML and CSS only, include responsive styling for smaller screens, and are organised into separate folders for GitHub submission.

Before submission, verify all student details, replace sample contact information and illustrative prices where necessary, and add screenshots of the rendered websites if required by your faculty.
